

## 04- Linking to a CSS file

---

### LINKING TO A CSS FILE

The screenshot shows a code editor with two tabs: 'index.html' and 'style.css'. The 'index.html' tab is active, displaying the following code:

```
1 <html>
2   <head>
3     <title>Linking to a CSS file</title>
4     <link rel="Icon" type="image/ico" href="./images/favicon.ico" />
5     <link rel="stylesheet" type="text/css" href="./css/style.css" />
6   </head>
7   <body>
8
9   </body>
10 </html>
```

Three callout boxes provide explanations for the attributes in the second `<link>` tag:

- Specifies the type of document being linked to**: Points to the `type="text/css"` attribute.
- Specifies the path to the CSS file**: Points to the `href="./css/style.css"` attribute.
- Specifies the relationship between the Html page and the file it is linked to**: Points to the `rel="stylesheet"` attribute.

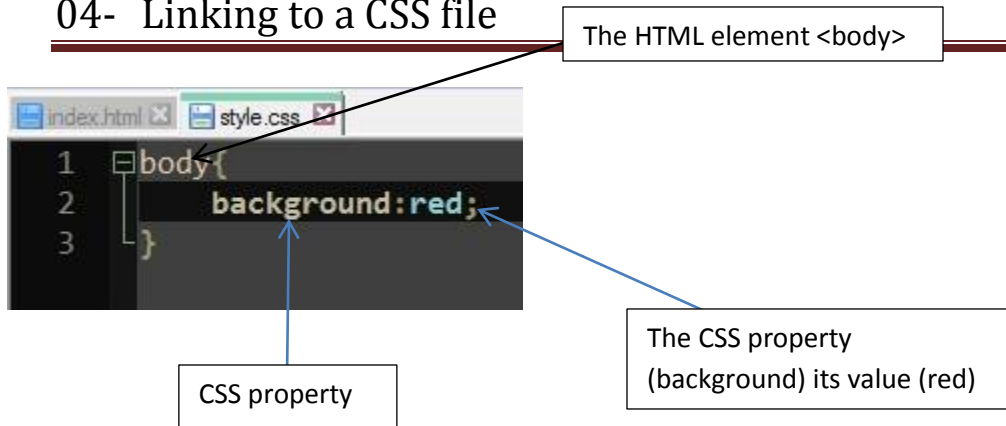

#### Note:

The **<link>** element is used in an Html document to tell the browser where to find a particular file.

The **<link>** element is called an **empty element** because it does not need a closing tag.

An HTML page can use more than one CSS stylesheet.
