

### The font-family property

The font-family property allows you to specify the typeface that should be used for any text inside the elements to which a CSS rule applies.

The value of this property is the name of the typeface you want to use.

You can specify a list of fonts separated by commas so that, if the user does not have your first choice of typeface installed, the browser can try to use an alternative font from the list.

E.g

## 031- The font-family property

NB: if a font-name is made-up of more than one word, it should be put in double quotes.

E.g

```
1 body{
2   background:#eeeeee;
3   margin:0px;
4   font-size:13px;
5   font-family:aller, calibri, verdana, "Times New Roman";
6   text-align:justify;
7 }
8
```

The typeface "Times New Roman" is made up of more than one words.

### Feedback

Comr. Mansur Usman Terrang

This Web Development Class is an excellent initiative that I'm very proud and happy to be part of.

I believe people are going to benefit a lot from this class, most especially the beginners.

They will learn how to develop websites either for personal or business purpose, which in any way beneficial.

Thank you Team Piccolo.

Ahmad Ahmad Abdulkadir

I really like the Web Development Class. I have learnt many things right from the inception of the class.

The videos are very educative and the PDF files makes the videos more elaborated.

Engr. Abdullahi Kabir

The Web development Class is very educative.

The videos are simple and straight to the point.

You can't get something like this for free.

Engr. Muhammad Sani Ibrahim

I'm very glad and fortunate to be part of this tutorial class organized by Team Piccolo Global Enterprises; however I found this class very interesting and helpful. I have learned and practice so much.

It has indeed added much value to my educational experience as a qualified Network Engineer.

I say a big thanks to Team Piccolo Global Enterprises, may the Almighty uplift the value of this team to a high standard.
