

032- The font-weight, font-style, text-transform property

The font-weight, font-style, text-transform property

font-weight property

The font-weight property allows you to create bold text. There are two values that this property commonly takes.

- a) normal: this causes text to appear at a normal weight.
- b) Bold: this causes text to appear bold.

```
140 #feed_back{  
141     font-weight:bold;  
142 }
```

Feedback

Comr. Mansur Usman Terrang

This Web Development Class is an excellent initiative that I'm very proud and happy to be part of.

I believe people are going to benefit a lot from this class, most especially the beginners.

They will learn how to develop websites either for personal or business purpose, which in any way beneficial.

Thank you Team Piccolo.

Ahmad Ahmad Abdulkadir

I really like the Web Development Class. I have learnt many things right from the inception of the class.

The videos are very educative and the PDF files makes the videos more elaborated.

Engr. Abdullahi Kabir

The Web development Class is very educative.

The videos are simple and straight to the point.

You can't get something like this for free.

Engr. Muhammad Sani Ibrahim

I'm very glad and fortunate to be part of this tutorial class organized by Team Piccolo Global Enterprises; however I found this class very interesting and helpful. I have learned and practice so much.

It has indeed added much value to my educational experience as a qualified Network Engineer.

I say a big thanks to Team Piccolo Global Enterprises, may the Almighty uplift the value of this team to a high standard.

the texts appear to be **bold**

032- The font-weight, font-style, text-transform property

font-style property

If you want to create italic text, you can use the font-style property. There are three values this property can take.

- a) normal: this causes text to appear in a normal style not italic or oblique.
- b) italic: this causes text to appear italic
- c) oblique: this causes text to appear oblique.

```
140 #feed_back{  
141     font-style:italic;  
142 }  
143
```

The texts appears to be **italic**

032- The font-weight, font-style, text-transform property

text-transform property

The text-transform property is used to change the case of text giving it one of the following values.

- a) uppercase: this causes the text to appear uppercase.
- b) lowercase: this causes the text to appear lowercase.
- c) capitalize: this causes the first letter of each word to appear capitalized.

```
140 #feed_back{  
141     text-transform:uppercase;  
142 }  
143
```
