

Basic Table Structure

The **<table>** element is used to create a table.

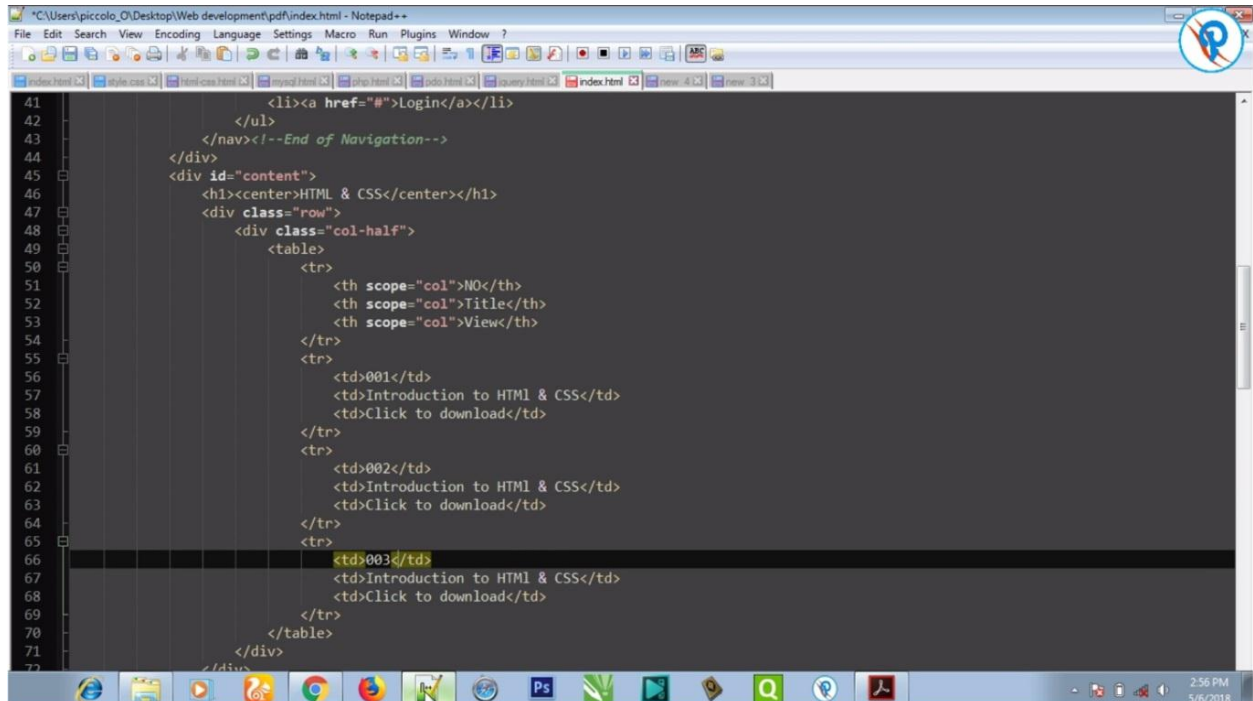

The contents of the table are written out row by row.

The **<tr>** element is used to start a row.

Each cell of a table is represented using a **<td>**

The **<th>** is used just like the **<td>** element but its purpose is to represent the heading for either a column or a row.

You can use the **“scope”** attribute on the **<th>** element to indicate whether it is a heading for a column or a row.

```
41         <li><a href="#">Login</a></li>
42     </ul>
43 </nav><!--End of Navigation-->
44 </div>
45 <div id="content">
46     <h1><center>HTML & CSS</center></h1>
47     <div class="row">
48         <div class="col-half">
49             <table>
50                 <tr>
51                     <th scope="col">NO</th>
52                     <th scope="col">Title</th>
53                     <th scope="col">View</th>
54                 </tr>
55                 <tr>
56                     <td>001</td>
57                     <td>Introduction to HTML & CSS</td>
58                     <td>Click to download</td>
59                 </tr>
60                 <tr>
61                     <td>002</td>
62                     <td>Introduction to HTML & CSS</td>
63                     <td>Click to download</td>
64                 </tr>
65                 <tr>
66                     <td>003</td>
67                     <td>Introduction to HTML & CSS</td>
68                     <td>Click to download</td>
69                 </tr>
70             </table>
71         </div>
72     </div>
73 </div>
```
